Fix mobile confidence. Prove contribution before scaling.

Assessment concept · Evidence: supplied April–September 2026 channel/device analytics. Targets are test hypotheses, not forecasts or causal claims.

PRIORITY	CHANGE / EVIDENCE	MEASURE / DECISION
01 Repair mobile checkout	Instagram mobile: **16,027 sessions, 56 orders, 0.35% conversion** vs 1.19% desktop. Only 56 of 478 mobile checkouts completed (11.7%). Put fabric, fit, making time, shipping and returns near the buy button; preserve the bag. First audit payment failures, surprise costs and checkout usability.	Instrument product view, size choice, add to bag, checkout, purchase and errors by channel/device. Target **0.50% mobile conversion** and **15% checkout completion**. Compare equal periods, show uncertainty, and guard contribution/order, returns and load time.
02 Help shoppers choose for an occasion	Build occasion journeys and catalogue-backed matching for occasion, size and budget; show the latest estimated arrival and a no-match state. Email: **52 orders / 1,744 sessions = 2.98%**; this association does not prove incremental lift.	Track helper open, submit, no-match, result click and purchase. Prefer a randomised holdout when volume allows; exposed shoppers self-select. Target a **15% relative add-to-bag lift** with no rise in late deliveries. Confirm measurements, care, composition and studio availability.
03 Gate paid-social scale on margin	Paid social: **£3,376 revenue / £2,700 spend = 1.25× ROAS**; 10 orders / 4,198 sessions = 0.24%. At 55% gross margin: £1,856.80 contribution before other costs; –**£843.20 after ads**. Gross-margin-only break-even is 1.82× ROAS; true break-even is higher.	Pause scale; reconcile attribution. Run a capped occasion-led test after mobile fixes. Review contribution after ads, fees, shipping and returns weekly; scale only above true break-even. Count backlog against the **20-piece/week** studio cap.

BLACK FRIDAY

Run the requested **20% off eight selected pieces**, with original and sale prices together. Verify style margins and capacity; stop date-sensitive promotion when the latest estimate misses the occasion. At unchanged costs, discounting cuts gross profit from 55% to 35% of original price (**43.75% of discounted revenue**) before acquisition and fulfilment. No invented scarcity, reviews or delivery guarantees.

Data caveat. Email desktop recorded 39 checkouts but 38 add-to-carts. Audit event definitions and attribution before treating the funnel as sequential. No significance, causal lift or spare capacity is assumed.
